Leuven UV forecast script displays this message: **The UV Index Forecast is currently not available**

This is not a Leuven-Template error but a DNS problem with multiple hosting companies.

About one of 4 websites which retrieve UV forecast data from temis.nl face dns errors

name lookup timed out

www.temis.nl should be translated to 145.23.254.72 by your hosting company DNS servers but in some cases it is not done.

As a result result no data is retrieved and the

Script weather??/uvforecastv3.php Try to find this line

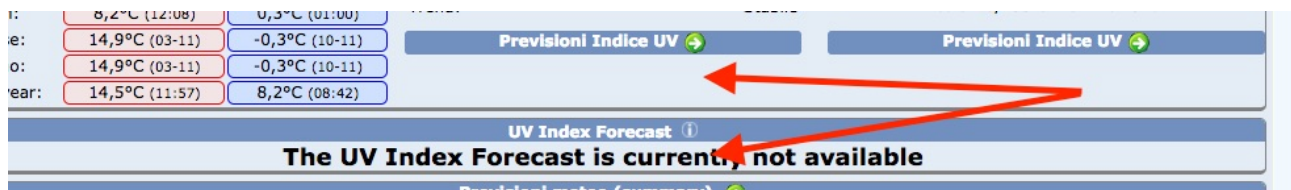

```
$fullurl = 'http://www.temis.nl/uvradiation/nrt/uvindex.php?lon='.$suvlon.'&lat='.$suvlat;
```

Add an extra line with the correct ip-adres instead of www.temis.nl

This line can be removed later when the DNS problem is gone.

```
$fullurl = 'http://www.temis.nl/uvradiation/nrt/uvindex.php?lon='.$suvlon.'&lat='.$suvlat;
```

```
$fullurl = 'http://145.23.254.72/uvradiation/nrt/uvindex.php?lon='.$suvlon.'&lat='.$suvlat;
```
